

Noms des petites planètes Namen van kleine planeten

Bij haar ontdekking krijgt een kleine planeet een voorlopige aanduiding. Als later haar baan goed gekend is, krijgt ze een definitief (volg)nummer toegekend, en wordt vastgesteld wie de ontdekker is. Dit is niet noodzakelijk de eerste persoon die de kleine planeet waargenomen heeft, want om als ontdekker erkend te worden moet men voldoende waarnemingen geven om toe te laten een voorlopige baan voor de kleine planeet te berekenen. Het is dan het voorrecht van de ontdekker om een naam voor de kleine planeet voor te stellen. Thans zijn er zowat 620 000 genummerde kleine planeten, maar nog maar ~23 500 daarvan hebben een naam gekregen.

Oorspronkelijk werden de namen gekozen in de lijn van die voor de grote planeten, namelijk goden uit de klassieke mythologie. Al gauw bleek dat die namen snel zouden uitgeput raken, en ging men over op deugden, namen van astronomen, landen of steden. In het begin werden deze nog gelatiniseerd, maar ook daarvan is men afgestapt. Tegenwoordig is er bijna geen beperking meer wat de namen betreft. Men vindt er beroemde personen, sterrenwachten, onbekende personen, troeteldieren, en al wat een ontdekker zomaar kan bedenken. Langs de rand van de koepel vindt u een alfabetische lijst van alle namen van kleine planeten (aangevuld tot 1 september 2022), voorafgegaan door hun definitief nummer.

Namen in het rood verwijzen naar asteroïden die genoemd zijn naar iets Belgisch. Nummers in het rood verwijzen naar asteroïden die ontdekt zijn door een Belg. Nummers op een gele achtergrond verwijzen naar asteroïden die te Ukkel ontdekt zijn, tot nu toe de enige plaats in België waar kleine planeten ontdekt zijn. De lijst van de Belgische asteroïden wordt up-to-date gehouden in samenwerking met Dirk Devlies en Jozef Denoyelle.

Suite à sa découverte, une petite planète reçoit une désignation provisoire. Lorsque, plus tard, son orbite est bien établie, elle reçoit un numéro d'ordre définitif et le découvreur est désigné. Celui-ci n'est pas nécessairement le premier observateur. Pour avoir droit au titre de découvreur, il faut avoir fourni un ensemble cohérent et étendu d'observations permettant d'en assurer une première orbite. Cette paternité confère ensuite au découvreur le privilège de lui proposer un nom. A présent, on compte quelque 620 000 petites planètes numérotées, mais seulement ~23 500 d'entre elles ont déjà reçu un nom.

A l'origine, les noms étaient choisis de la même façon que ceux admis pour les grosses planètes, notamment en faisant appel aux personnages de la mythologie classique. Bien vite il apparut que leur liste serait épuisée et l'on passa aux noms de vertus, d'astronomes, de pays et de villes. Au début ces derniers étaient latinisés mais là aussi, la tradition fut abandonnée. Actuellement, il n'y a pratiquement plus de limitation. On y trouve des noms de personnages célèbres, d'observatoires, d'inconnus, d'animaux de compagnie et de tout ce que l'imagination peut fournir. Sur le mur de la coupole la liste complète des noms des petites planètes, précédés de leurs numéros d'ordre (complétée jusqu'au 1^{er} septembre 2022), a été affichée dans l'ordre alphabétique.

Les noms en rouge indiquent des astéroïdes qui portent un nom qui font référence en lien avec la Belgique. Les numéros en rouge font référence à des astéroïdes découverts par des Belges. Les numéros sur fond jaune font référence aux astéroïdes découverts à Uccle, jusqu'à présent le seul site en Belgique où on a découvert des petites planètes. La liste des astéroïdes belges est tenue à jour en collaboration avec Dirk Devlies et Jozef Denoyelle.
