EUHFORIA

'European helispheric forcasting information asset'

Taking coronal model as lower boundary condition

Solar wind at @ 0.1 AU

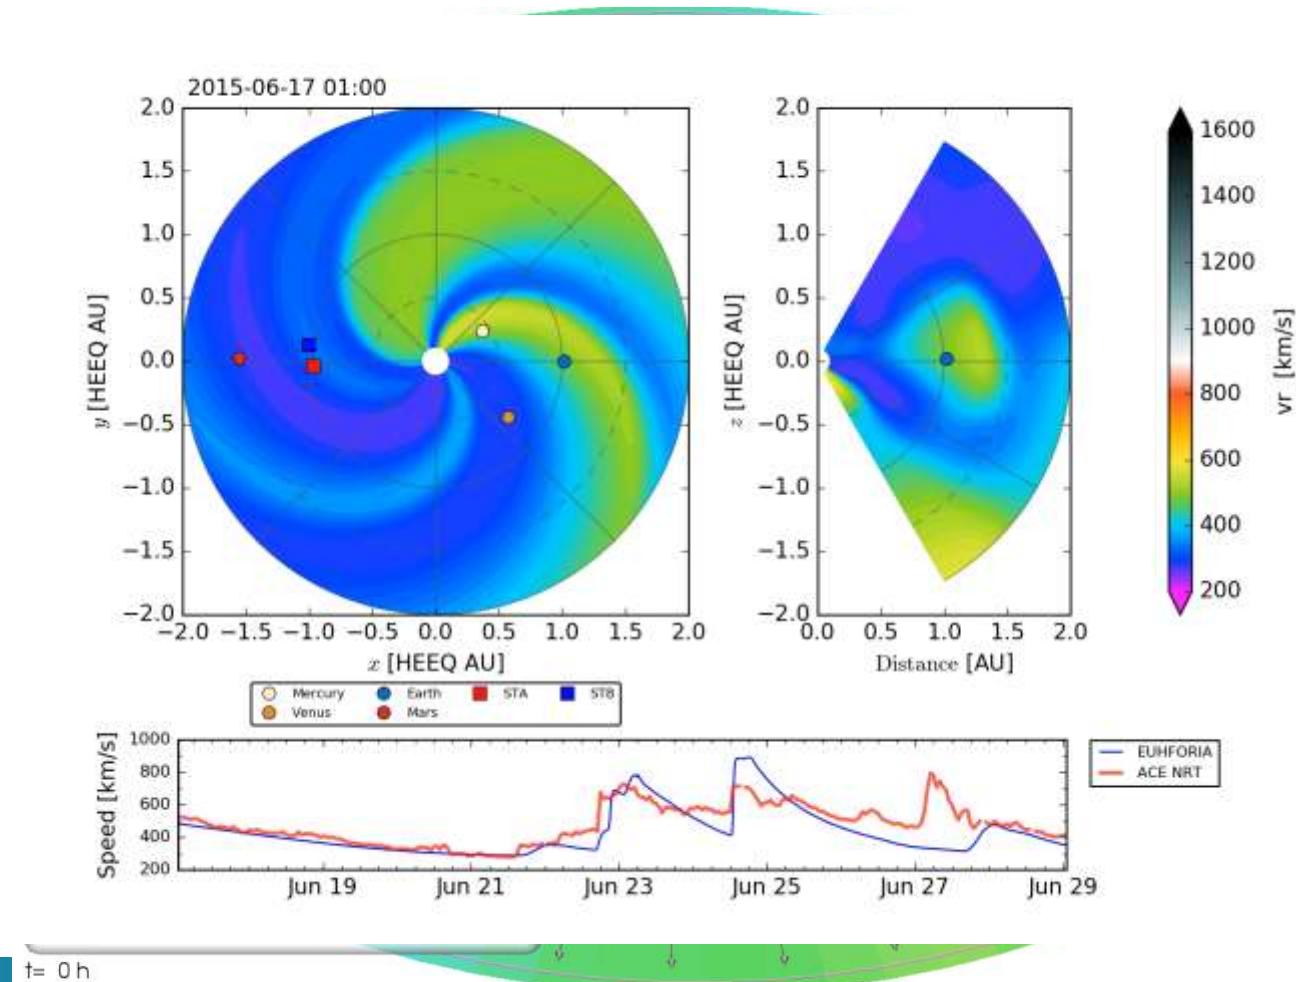

- Semi-empirical:
 - Gong/ADAPT magnetometer
 - PFSS
 - WSA/DCHB+CSC

CMEs at @ 0.1 AU

- Cone model
- Spheromak + GL

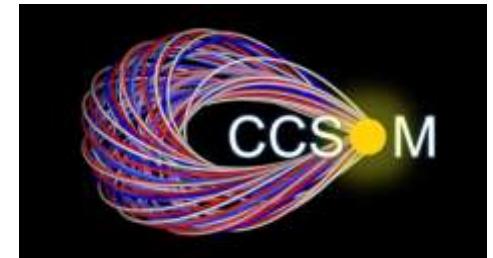

Inner Heliosphere

- 0.1 AU \rightarrow 2.1 AU
- Time-dependent 3D MHD (FVM + CT approach for advancing \mathbf{B} div-free)

Credit: Jens Pomoell

EUHFORIA Rationale

Science (*CCSOM project*):

- Quantify the **deformation, deflection and erosion of flux ropes** evolving in the inner heliosphere
- Characterize the **magnetosheaths** of CMEs
- Clarify the role of CME-CME interactions in enhanced **SEP production**

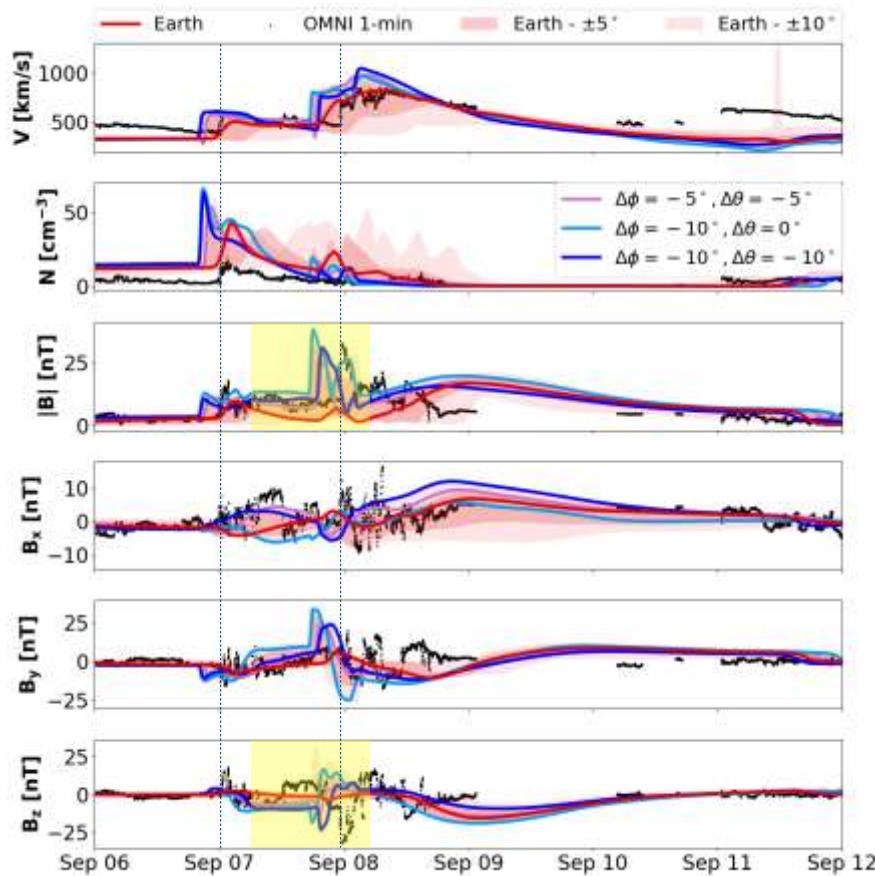

Applications:

- Space weather forecasts (“European ENLIL”)
 - Time of arrival / **Geo-effectiveness**
- Support for space missions (e.g. PSP, Solo)

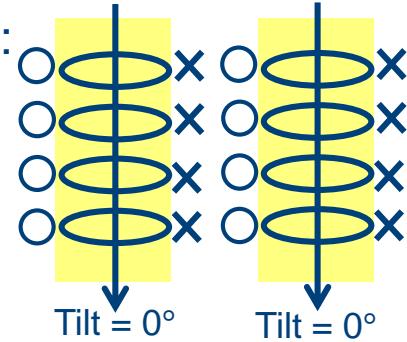

September 2017 CMEs with EUHFORIA

Spheromak results: interacting flux-ropes

- 2 spheromaks (CMEs on Sep 4 & Sep 6)
- Flux-rope orientations:

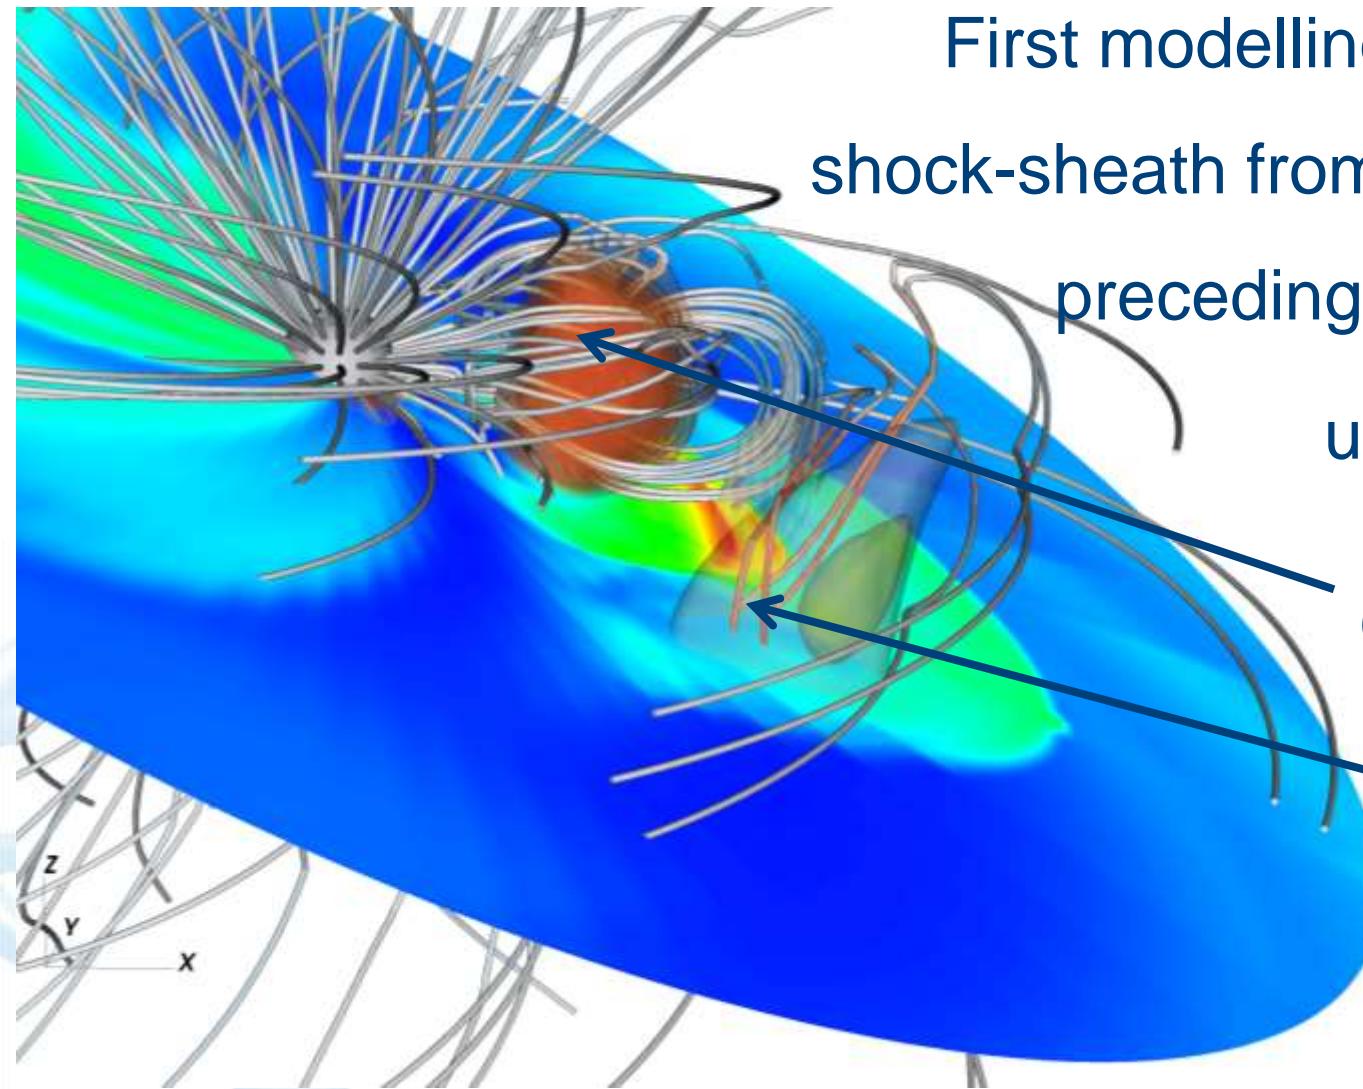

Array of virtual spacecraft **around Earth**:

- Enhanced shock-sheath $B(B_z)$ from compression of fields in preceding ejecta
- In situ predictions susceptible to location
 - Best B_z prediction SE of Earth

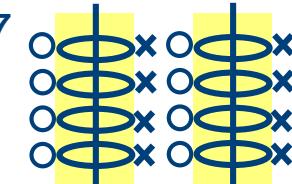

September 2017 CMEs with EUHFORIA

First modelling of geoeffective
shock-sheath from interaction with
preceding magnetic ejecta
using EUHFORIA

Flux-rope 2
(6 Sep 2017
CME)

Flux-rope 1
(4 Sep 2017
CME)

VSWMC development

- **Phase 1** (*ESTEC/Contract No. 4000106155-VSWMC – Phase 1*)
 - Study **User and System Requirements** with 5–10 yr horizon
 - Development **proof of concept prototype** (limited # models)
- **Phase 2** (*P2-SWE-XIV - Virtual Space Weather Modelling Centre - Part 2*)
 - Integration of **new models** and **new model couplings**, including a first demonstration of an **end-to-end simulation capability** + models can be installed centrally or remotely
 - Further development of the **coupling toolkit** and **front-end GUI** (available through the [ESA SSA/SWE portal](#) (28/05/19))
 - Development of **APIs** & Improved access to input and output data (SPASE format)
 - Development of **integrated visualization tool** modules

First operational version VSWMC
